

# Environmental Finance Centers

## Environmental Finance Center Grant Program

On November 4, 2022, EPA announced the selection of 29 Environmental Finance Centers (EFCs) that will help communities across the country access federal funding for infrastructure projects that improve public health and environmental protection.

The EFCs will deliver targeted technical assistance to local governments, states, Tribes, Territories, and non-governmental organizations to protect public health, safeguard the environment, and advance environmental justice. Thanks to President Biden's Bipartisan Infrastructure Law, the selected EFCs will help underserved communities that have historically struggled to access federal funding receive the support they need to access resources for water infrastructure improvements.

---

## Bipartisan Infrastructure Law

The nation has underinvested in water infrastructure for too long. Insufficient water infrastructure threatens America's security, and it risks people's health, jobs, peace of mind, and future prosperity. The [Bipartisan Infrastructure Law](#) delivers more than [\\$50 billion](#) to EPA to improve our nation's drinking water, wastewater, and stormwater infrastructure - the single largest investment in water that the federal government has ever made.

---

## List of Environmental Finance Centers

Many communities with significant pollution challenges and infrastructure needs have not been able to access federal funding and financing programs to address these concerns. EPA recognizes that existing environmental gains cannot be preserved, nor further progress achieved, unless states, Tribes, and local governments, and non-governmental organizations have the resources to develop and sustain environmental projects.

Through the EFC grant program, technical assistance providers will help communities develop and submit project proposals, including State Revolving Fund (SRF) applications for Bipartisan Infrastructure Law funding. EFCs will support underserved communities with technical assistance to identify sustainable infrastructure solutions. These entities will provide states, Tribes, and local governments with technical assistance services to advance equitable health and environmental protections.
