Transmission Siting and Economic Development Grants Program

The Transmission Siting and Economic Development (TSED) Grant Program is a \$760 million investment through the Inflation Reduction Act designed to advance critical transmission projects by accelerating siting and permitting while supporting economic development efforts in communities impacted by transmission construction and operation.

Selections

[On July 24, 2024](#), the U.S. Department of Energy (DOE) selected 20 projects across 16 states to receive up to \$371 million to accelerate the permitting of high-voltage, interstate transmission projects and support community infrastructure projects along major new and upgraded transmission lines.

The TSED program includes two distinct grants: grants for siting and permitting activities and grants for economic development activities. GDO selected four

siting and permitting projects for a combined federal investment of more than \$17 million. GDO selected 16 economic development projects for a combined investment of more than \$353 million. DOE expects to release the second TSED funding opportunity in early 2025.

Across the country, the electric grid is under unprecedented pressure to deliver more power than ever before! From extreme weather to rising demand, our power systems face increasing challenges. The U.S. Department of Energy's (DOE) Grid Deployment Office has launched the Transmission Siting and Economic Development (TSED) Grants program, a multimillion-dollar program to support tribal, state, and local communities affected by the construction or upgrades of high-voltage interstate or offshore electricity transmission lines.
