

# 2023 Bipartisan Infrastructure Law Funded Fish Passage Projects

## About this Collection

A collection of fish passage projects funded through the 2023 Bipartisan Infrastructure Law.

In 2023, the U.S. Fish and Wildlife Service announced 22 states will receive \$35 million to support 39 projects that will address outdated or obsolete dams, culverts, levees and other barriers fragmenting our nation's rivers and streams.

Around the world, millions of barriers are fragmenting rivers, blocking fish migration, and putting communities at higher risk to flooding. Improving [fish passage](#) is one of the most effective ways to help conserve vulnerable species while building safer infrastructure for communities and improving climate resilience. The [Bipartisan Infrastructure Law \(BIL\)](#) provides a once-in-a-generation opportunity to invest in climate resilient infrastructure, healthy rivers and streams, and abundant fisheries. The 2023 projects represent the second year of a five-year commitment and build on the [40 projects announced last year](#).

## Search in the Collection

Working with others to conserve, protect and enhance fish, wildlife, plants and their habitats for the continuing benefit of the American people.
